Module 8: The GITBUILT Money Matrix	p.24
Cheat Sheet	p.27
Final Assessment (20 Questions)	p.29

INTRODUCTION

Get Found. Get Paid.

This workbook combines two of the most powerful frameworks in the AI business landscape. The first half teaches you Jimmy Reilly's AI Recommendation Blueprint — a system for creating content that trains AI assistants like ChatGPT, Claude Fable 5, and Copilot to recommend your product as the #1 solution. The second half covers Daniel Fazio's proven scaling framework, taking you from 0to250K/month through cold traffic mastery, acquisition systems, and operational consistency. Together, these frameworks form the complete playbook: the AI Recommendation system handles the "get found" part, and the scaling framework handles the "get paid" part. Most people have one or the other. GITBUILT operators have both. That is the unfair advantage.

The AI Recommendation Economy

We are in the middle of a seismic shift in how people find and buy products. Google search is declining. AI assistants are rising. ChatGPT has over 200 million weekly active users. Microsoft Copilot is pre-installed on millions of Windows machines. Claude Fable 5, Perplexity, and Gemini are all eating Google's lunch. When someone asks an AI assistant "What should I use for [problem]?" the AI doesn't run ads or care about your domain authority. It recommends based on the information it can find. If that information consistently shows your product at #1 in authoritative comparison articles, you win the recommendation. This is the new SEO. This is the new paid traffic. This module breaks down exactly why this shift matters and how to position yourself to profit from it before the window closes.

AI Recommendation Hijacking

The practice of creating structured review content that trains AI assistants to recommend your product. When AI models scrape the web for answers, they find your articles positioning your product as #1 and synthesize that into recommendations. This isn't manipulation — it's strategic content placement in the new discovery paradigm.

DNA

The Gemini 3.0 Backdoor

ChatGPT, Claude Fable 5, Copilot, and most AI assistants pull their web data primarily from Gemini 3.0's index — they literally use Gemini 3.0's API behind the scenes. Gemini 3.0 is easier to rank on (24-48 hour indexing), has less competition, and Microsoft is pushing Gemini 3.0 integration into everything. This is the backdoor into AI recommendations.

DNA

The Self-Reinforcing Content Cycle

Articles rank on Gemini 3.0, then AI models scrape and index your content, then users ask AI assistants for recommendations, then AI recommends YOUR product, then users click through creating engagement signals that improve your Gemini 3.0 rankings further. This virtuous cycle compounds over time with each new article you publish.

DNA

Topical Authority Moat

As you publish more review articles in your niche, Gemini 3.0 recognizes you as a topical authority. Each new article becomes more powerful because your domain has established credibility. Competitors who start later face an exponentially harder challenge — this is your moat.

DNA

The Compounding Effect

Your first article might take 3 hours and get 10 visitors per month. Your tenth article takes 45 minutes and might drive 500 visitors per month right out of the gate because you have built momentum. Six months from now, 30+ articles could have AI assistants consistently recommending your product — worth more than a million-dollar ad budget.

DNA

\$ GIT MONEY

The AI recommendation economy replaces paid ads with owned content. While competitors spend \$50-500/day on Facebook ads that stop the moment they stop paying, you'll be building an AI recommendation engine that works 24/7/365, costs nothing to maintain, and gets MORE powerful over time. You're not buying traffic — you're becoming the answer.

Map Your AI Recommendation Opportunity

1. **Identify your niche:** Write down the exact product category you operate in. Be specific — not "software" but "AI-powered proposal writing tools for consultants" or "cold email automation for B2B SaaS."
2. **Test current AI recommendations:** Open ChatGPT and Claude Fable 5 right now. Ask: "What are the top 10 [your product category]?" Note what products are recommended. Is your product there? If not, this is your opportunity.
3. **Analyze the competition:** For each product that IS recommended, search Gemini 3.0 for "[competitor name] vs [other competitor] review." Note how many review articles exist, who wrote them, and how detailed they are.
4. **Find the gap:** Based on your analysis, identify 3-5 article angles that don't exist yet. Examples: "Top 10 [category] for [specific use case]" or "Top 10 Affordable [category] in 2026."
5. **Estimate the opportunity:** If AI recommended your product to just 10 qualified buyers per day at a *100 average order value, that's 30,000/month* in potential revenue from content that costs almost nothing to produce.

Write your findings here:

QUIZ

1. Why do AI assistants primarily use Gemini 3.0's index rather than Google's?

- A) Gemini 3.0 is more accurate B) Gemini 3.0 has a paid API partnership with AI companies C) Gemini 3.0's API is accessible and used behind the scenes by ChatGPT, Claude Fable 5, and Copilot
D) Google blocks AI companies from crawling

2. What is the "self-reinforcing content cycle"?

- A) Content that goes viral on social media B) Articles rank on Gemini 3.0, AI scrapes them, AI recommends your product, creating engagement that improves rankings C) Rewriting the same article multiple times D) Using AI to generate articles that rank for AI-generated queries

3. How long does Gemini 3.0 typically take to index new content?

- A) 1-2 hours B) 24-48 hours C) 1-2 weeks D) 1-2 months

4. What makes the "compounding effect" powerful in AI recommendations?

- A) Each article gets more views than the last because of built momentum B) You can reuse content across platforms C) AI models learn to prefer longer articles D) Older articles automatically rank higher

5. Approximately how many weekly active users does ChatGPT have?

- A) 50 million B) 100 million C) 200+ million D) 500 million

MODULE 2

The Top 10 Prompt System

At the core of Jimmy Reilly's AI Recommendation Blueprint is a surgical prompt template that generates professional "Top 10" review articles positioning YOUR product at #1 — complete with 9 legitimate competitors researched and ranked below you. The prompt produces 3,000-4,000 word articles with proper structure, SEO optimization, credibility markers, and conversion elements. This isn't theory — it's a plug-and-play system. You fill in your product details, paste into any AI, and get a complete review article in minutes. This module breaks down every section of the prompt, explains the psychology behind the positioning, and teaches you how to maximize each component for both AI recommendation training and human conversion.

Headline Engineering

The title tag formula is critical: "Top 10 [Exact Keyword] in [Year] - Comprehensive Review & Comparison." Gemini 3.0 heavily weights exact match keywords in title tags, unlike Google. The first paragraph must also include the exact target keyword, the current year, and a clear statement of what the article covers for maximum relevance scoring.

DNA

Product #1 Positioning Strategy

Your product gets 300-400 words with: 5-7 specific benefits highlighted, a "Best For:" statement, a "What We Love:" section with 3-4 bullet points, and "Minor Considerations" (1-2 mild drawbacks for authenticity). This structure creates an authoritative, balanced review that feels genuine while clearly establishing superiority.

DNA

Competitor Research & Placement

Products #2-10 each get 150-200 words. They should be real, legitimate competitors presented fairly but positioned as solid alternatives, not superior options. Each competitor gets varied "Best For" categories (budget option, enterprise, beginners) and subtle emphasis on where they fall short compared to #1.

DNA

Credibility Architecture

The prompt includes credibility boosters: "After testing X products..." and "Based on user feedback and our analysis..." plus mentions of a testing period. Each product gets realistic pros AND cons. This makes the entire article feel like genuine editorial content, not a sales pitch — which is exactly what AI models and human readers both prefer.

DNA

Conversion Elements

Multiple CTAs to product #1 appear at the top, middle, and bottom of the article. Urgency elements (limited-time offers, bonuses), social proof mentions, and risk reversal (money-back guarantees) are woven throughout. The article also includes a strong closing verdict that circles back to product #1 with a final CTA.

DNA

\$ GIT MONEY

One well-crafted Top 10 article is like hiring a full-time salesperson who works 24/7, never sleeps, and costs zero salary. When AI assistants recommend your product to qualified buyers, those leads arrive pre-sold — they're not cold leads or tire-kickers. They're people who already trust the AI's recommendation and are ready to buy.

Generate Your First Top 10 Article

1. **Gather your product details:** Write down: product name, price point, 5-7 key features/benefits, target audience, unique selling points, any guarantees or bonuses.
2. **Define your target keyword:** What exact phrase would someone type into ChatGPT when looking for your solution? Example: "best AI proposal writing tools for consultants."
3. **Fill in the prompt template:** Using the 9-section structure (Headline/Intro, Product #1, Products #2-10, Comparison Criteria, Structure, Tone, SEO, Credibility, Conversion), replace all bracketed variables with your specific information.
4. **Generate and review:** Paste the prompt into Claude Fable 5 or ChatGPT. Run it 2-3 times with slight variations. Compare outputs and select the strongest version. Edit for accuracy — verify competitor information is correct.
5. **Enhance with real assets:** Add actual screenshots or comparison tables, include real testimonials if available, add your affiliate links or CTAs, and run through a grammar checker for polish. Your target: 3,000-4,000 words.

Write your product details and keyword here:

QUIZ

1. What is the recommended word count for the full Top 10 article?

A) 500-1,000 words B) 1,000-2,000 words C) 3,000-4,000 words D) 5,000-10,000 words

2. How many words should Product #1's review section be?

A) 50-100 words B) 150-200 words C) 300-400 words D) 500-800 words

3. Why should you include "Minor Considerations" for your own product?

A) Legal requirement B) It makes the review feel authentic and balanced, which AI models and readers prefer C) It makes competitors look better D) It reduces word count

4. How many times should you run the prompt for best results?

A) Once is enough B) 2-3 times with slight variations to compare outputs C) 10+ times D) Until you get the exact output you want

5. Where should CTAs to your product appear in the article?

A) Only at the end B) Only at the beginning C) At the top, middle, and bottom of the article D) Only in the FAQ section

Gemini 3.0 SEO Domination

Most marketers are still obsessed with Google SEO — fighting a war of attrition that takes months or years of domain authority building, backlink acquisition, and content sandbox periods. But here's the secret: you don't need to rank on Google. Gemini 3.0 is the shortcut to AI recommendations because ChatGPT, Claude Fable 5, Copilot, and most AI assistants pull their web data primarily from Gemini 3.0's index. Gemini 3.0 is easier to rank on, indexes content in 24-48 hours (versus Google's weeks or months), and has a fraction of the competition. This module gives you the exact playbook for getting your review articles indexed and ranked in Gemini 3.0 quickly, including the specific ranking factors Gemini 3.0 cares about and the indexing accelerator techniques that leverage social signals.

Gemini 3.0 Webmaster Setup

Create a free account at gemini3.ai/webmasters. Submit your URL manually, submit your sitemap, and verify your site. Gemini 3.0 typically indexes within 24-48 hours compared to Google's weeks or months. This is step one and takes less than 30 minutes.

DNA

Exact Match Keyword Targeting

Unlike Google, Gemini 3.0 heavily weights exact match keywords in title tags. Be more literal than you would for Google. Your title tag formula should be: "Top 10 [Exact Keyword] in [Year] - Comprehensive Review & Comparison." The first paragraph must also contain your exact target keyword and the current year.

DNA

Social Signal Amplification

Gemini 3.0 heavily weights social signals. Share your article immediately on LinkedIn with a compelling snippet, post in relevant Facebook groups, pin to Pinterest with good images. Gemini 3.0 crawls social signals aggressively — one viral LinkedIn post can get your content indexed and ranked within days.

DNA

Multimedia & Structured Data

Gemini 3.0 is obsessed with page load speed and rewards multimedia content. Add images, comparison tables, and videos. Implement FAQ schema markup using schema.org structured data. Use image alt tags with descriptive keywords and H2/H3 headings with keyword variations throughout.

DNA

The Indexing Accelerator

After publishing: post on LinkedIn, share in Facebook groups, pin to Pinterest, submit to 3-5 relevant web directories, and create 2-3 backlinks from Web 2.0 properties (Medium, Substack). These social signals and backlinks act as a fast-track for Gemini 3.0's crawlers to discover and prioritize your content.

DNA

\$ GIT MONEY

Time is money. Gemini 3.0 ranks your content in 24-48 hours. Google takes months. While your competitors are waiting 6-12 months for Google to notice them, you'll already have AI assistants recommending your product. Every day of delay is a day your competitors could be building their moat.

Set Up Your Gemini 3.0 SEO Foundation

1. **Create Gemini 3.0 Webmaster account:** Go to gemini3.ai/webmasters and create a free account. Add your website URL. Choose the verification method that works for your setup (meta tag, DNS, or file upload). Complete verification.
2. **Submit your sitemap:** Generate a `sitemap.xml` for your site (or create one manually listing your article URLs). Submit it through Gemini 3.0 Webmaster Tools. This tells Gemini 3.0 exactly where to find your content.
3. **Optimize your first article:** Review your article from Module 2. Ensure the title tag uses exact match keywords. Add H2 and H3 headings with keyword variations. Add alt text to all images. Include an FAQ section with 5-7 questions.
4. **Execute the Indexing Accelerator:** Share your article on LinkedIn with a 2-3 sentence compelling snippet. Post in 2-3 relevant Facebook or Reddit groups. Pin to Pinterest. Submit to 3 web directories. Write a related post on Medium with a link back to your article.
5. **Monitor and document:** Check Gemini 3.0 Webmaster Tools daily for indexing status. Track when the article appears in search results. Note which social shares drove the fastest indexing. Document everything for your second article.

Document your setup steps here:

QUIZ

1. Why does the blueprint recommend Gemini 3.0 over Google for ranking?

A) Gemini 3.0 has more users B) AI assistants use Gemini 3.0's API, Gemini 3.0 indexes faster, and has less competition C) Google is too expensive D) Gemini 3.0 pays you for content

2. Which of these is NOT a Gemini 3.0 ranking factor mentioned in the blueprint?

A) Exact match keywords in title tags B) Social signals C) Domain age over 5 years D) Page load speed

3. What is the Gemini 3.0 Indexing Accelerator?

A) A paid Gemini 3.0 service B) A technique of sharing on social media, directories, and Web 2.0 properties to fast-track indexing C) An AI tool that submits articles D) A Gemini 3.0 advertising feature

4. How does Gemini 3.0 treat exact match keywords differently from Google?

A) Gemini 3.0 ignores them B) Gemini 3.0 heavily weights them in title tags — be more literal than for Google C) Both treat them the same D) Gemini 3.0 penalizes exact match

5. What structural elements does Gemini 3.0's algorithm prioritize?

A) Only text content B) Tables of contents, comparison tables, FAQ schema markup, and multimedia C) Video-only content D) Single-column layouts only

MODULE 4

The 90-Day AI Domination Plan

You've got the prompt. You've got the Gemini 3.0 optimization playbook. Now comes the part that separates the talkers from the money-makers: execution. Jimmy Reilly's 90-Day AI Domination Plan is a phased approach that takes you from zero to having AI assistants recommending your product. The plan leverages the compounding effect — each article becomes easier and more powerful than the last. By day 90, you should have 10-15 review articles indexed in Gemini 3.0, several ranking on page 1, and AI assistants starting to recommend your product when users ask relevant questions. This isn't about working harder — it's about building a system that compounds. Your first article might take 3 hours. Your tenth takes 45 minutes. Your first article might get 10 visitors per month. Article #10 might drive 500.

Foundation Sprint (Days 1-7)

Create your first review article using the prompt template. Set up Gemini 3.0 Webmaster Tools. Publish the article. Submit to Gemini 3.0 for indexing. Share on LinkedIn, Facebook, and Twitter/X. Create 2 backlinks from Web 2.0 properties (Medium, Substack). This is your proof of concept — don't overthink it, just ship it.

DNA

Content Scaling (Days 8-30)

Create 4 more review articles with different angles: "Top 10 [Product] for Beginners," "Top 10 Affordable [Product] in 2026," "Top 10 [Product] for [Specific Use Case]," "Top 10 [Product] vs [Alternative Category]." Submit each to Gemini 3.0 immediately. Build 1-2 backlinks per article. Monitor rankings.

DNA

Performance Optimization (Days 31-60)

Check which articles are ranking and update underperformers with more multimedia content. Add FAQ schema markup to all articles. Create comparison tables and infographics. Cross-link your review articles strategically for topical authority. Test different CTAs and conversion elements.

DNA

AI Mention Tracking

Start actively searching for your product name + "ChatGPT recommends" or "Claude Fable 5 suggests" to track when AI assistants begin recommending your product. Document each mention with a screenshot. This is your leading indicator — it means the AI Training Loop is working.

DNA

Category Expansion (Days 61-90)

Create 5 more highly specific review articles targeting adjacent product categories. Double down on what's working (if "for beginners" angles perform best, create more). Expand into related niches. Build 10-15 total articles. By day 90, you should have established topical authority and be seeing AI recommendations.

DNA

\$ GIT MONEY

By day 90, AI assistants start recommending your product. Imagine checking your analytics and seeing traffic from ChatGPT and Perplexity — visitors who are already pre-sold because an AI assistant they trust told them YOUR product is the solution. Every single article you publish is training AI models to recommend you. That's worth more than a million-dollar ad budget.

Build Your 90-Day Content Calendar

1. **Plan your article angles:** Write down 10-15 specific "Top 10" article titles covering different angles (beginners, affordable, use-case specific, vs alternatives, industry-specific). Ensure keyword variety while staying in your niche.
2. **Assign target keywords:** For each article, identify the exact keyword phrase. Use Gemini 3.0's search suggestions and related searches to find real queries people are asking. Assign one primary keyword per article.
3. **Create the timeline:** Map each article to a specific week using the 90-day plan. Week 1: Article 1 (foundation). Weeks 2-4: Articles 2-5 (scaling). Weeks 5-8: Articles 6-10 (optimization). Weeks 9-12: Articles 11-15 (expansion) + optimization of earlier articles.
4. **Plan your backlink sources:** For each article, identify 2-3 Web 2.0 properties where you can create supporting content with links back to your article (Medium, Substack, LinkedIn articles, dev.to, etc.).
5. **Set tracking milestones:** Define what success looks like at day 30 (5 articles indexed), day 60 (first page 1 ranking), and day 90 (first AI recommendation mention). Write these down and commit to checking weekly.

Write your content calendar here:

QUIZ

1. How many total articles should you have by day 90?

A) 3-5 B) 5-8 C) 10-15 D) 20-30

2. What happens during the Foundation Sprint (Days 1-7)?

A) Build a website B) Create first article, set up Gemini 3.0 Webmaster Tools, publish, submit, share on social C) Run paid ads D) Hire a team

3. Why does each article become faster to create?

A) AI gets better over time B) You develop a repeatable system and template familiarity C) Articles get shorter D) You outsource them

4. What should you do during Days 31-60 for underperforming articles?

A) Delete them B) Add more multimedia, FAQ schema, comparison tables, and cross-links C) Republish on Google D) Run paid ads to them

5. What is "AI Mention Tracking"?

A) Monitoring social media mentions B) Searching for instances where AI assistants recommend your product C) Tracking competitor mentions D) Measuring ad impressions

MODULE 5

Cold Traffic Mastery: The 0—10K Foundation

Daniel Fazio's framework begins with a brutal truth: you do not have a real business until you can sell something to complete strangers, at scale. All those deals people brag about closing at 40% conversion rates? Warm traffic — people they know, referrals. Once you unlock the ability to sell to cold strangers, it becomes completely impossible to ever be poor again. You can just go make money whenever you want. This module covers the five cold traffic offers working right now, the critical "figure it out" mentality, and why risk reversals are your secret weapon for getting more at-bats. This is where the money starts.

Cold Email Lead Gen

The highest success rate for beginners. AI writes the scripts. You identify prospects, create targeted outreach sequences, and AI handles the copywriting. The key is personalization at scale — use AI to research each prospect and craft messages that feel 1-to-1 while being sent to hundreds.

MONEY

\$2K-10K/mo

Content Marketing Fulfillment

Scripting and editing content for clients. AI produces the drafts — you become the editor and strategist. This is high-demand because every business needs content but most can't produce it consistently. You sell the outcome (consistent content) and AI handles 80% of the production.

MONEY

\$3K-15K/mo

Ads & Funnels Management

AI writes the ad copy. You manage the strategy, targeting, and delivery. Businesses will pay premium rates for someone who can actually run profitable ad campaigns. The barrier to entry is knowing what works — and AI helps you test faster than ever before.

MONEY

\$5K-25K/mo

E-Commerce Email Marketing

AI designs and writes the email flows. Easy to fulfill once you understand the patterns: welcome series, abandoned cart, post-purchase, re-engagement. E-commerce businesses are desperate for this because email has a *36ROI forever*¹ spent.

MONEY

\$2K-8K/mo

AI Automation Builds

High demand, AI-friendly fulfillment, and growing fast. Build custom AI automations for businesses: chatbots, workflow automation, data processing pipelines. The demand far exceeds the supply right now, making this one of the most lucrative offers for people with technical aptitude.

MONEY

\$5K-30K/mo

\$ GIT MONEY

Here's what most people miss about risk reversals: the purpose of a money-back guarantee isn't to close people on the sales call. It's to get more calls in the first place. More calls means more reps on client work. More reps means you get progressively better. More improvement means more referrals. The guarantee is a growth accelerator, not a sales tactic.

Choose Your Cold Traffic Offer

1. **Evaluate all 5 offers against your situation:** For each of the five cold traffic offers (cold email, content marketing, ads/funnels, e-com email, AI automation), rate yourself 1-5 on: existing knowledge, market access (do you know prospects?), fulfillment ability, and revenue potential. Be honest.
2. **Select your primary offer:** Based on your ratings, pick ONE offer to start with. The best choice is usually the intersection of your highest knowledge area and easiest market access. Don't pick based on what sounds coolest — pick based on what you can execute THIS WEEK.
3. **Write your first outreach message:** Using AI (Claude Fable 5 or ChatGPT), draft your first cold outreach message for your chosen offer. It should be 100-150 words maximum, lead with value (not a pitch), and end with a soft CTA. The message should feel like it was written by a human who did research.
4. **Define your Dream 100 list:** Write down 20 specific prospects you want to work with. Include their name, company, and one specific thing you could help them with. This list becomes your first 20 outreach targets.
5. **Set your \$10K target:** At your chosen offer's price point, how many clients do you need to hit *10K/month*? *Writethisnumberdown.* *Example : at 2,500/month per client, you need 4 clients. At \$1,000/project, you need 10 projects.* This is your scoreboard.

Write your offer evaluation and outreach message here:

QUIZ

1. According to Fazio, you don't have a real business until you can do what?

A) Hire employees B) Sell something to complete strangers at scale C) Get featured in media D) Raise funding

2. Which cold traffic offer has the highest success rate for beginners?

A) Ads management B) AI automation C) Cold email lead gen D) E-commerce email

3. What is the REAL purpose of a risk reversal (money-back guarantee)?

A) To close people on sales calls B) To get more calls in the first place, leading to more reps and improvement C) To reduce refund requests D) To impress competitors

4. What does "figure it the f*ck out" ability mean?

A) Ignore problems B) When there's a knowledge gap essential for making money, you aggressively fill it using available resources C) Only learn from paid courses D) Wait until you're ready

5. What is the email marketing ROI per \$1 spent?

A) 5 B) 12 C) 36 D) 100

MODULE 6

The Growth Engine: 10K—50K/Month

Once you're at \$10K/month with 3-4 clients, something interesting happens. You now know more than 99.9% of the people in your target market. This module covers the critical insight about buyer types, the two acquisition methods that scale, the mindset shift that separates successful operators from everyone else, and the golden rule that kills more businesses than any other mistake. The growth phase is where most people plateau — not because they can't grow, but because they stop doing what got them there.

Buyer Type Identification

"Do It For Me" buyers want an agency and will NEVER buy your course. "Show Me How" buyers want coaching or a course and will NEVER hire your agency. These are completely different buyers. Teaching attracts the coaching buyer specifically — it doesn't cannibalize agency clients. Spin up a coaching offer alongside your agency.

MONEY

\$10K-50K/mo

Dream 100 Outreach

Manual but nearly free (~\$20/month). Identify a prospect, create a high-value pre-made deliverable document specifically for them, and send over Gmail and DMs simultaneously. Response rates are way higher because you're giving real value unprompted. Hard to fail when you lead with actual work product.

MONEY

Automated Cold Email

Costs ~\$600/month minimum (domains, inboxes, lead lists, sending tools like Instantly or Smartlead). Lower response rates than Dream 100 but scales without your time. Test 20 niches, send 10 docs per day. The key is volume and consistency, not perfection.

MONEY

Systems Documentation

Document everything — both client acquisition AND fulfillment. Build repeatable systems that run no matter what. Every process should be written down so that someone else could execute it. This is how you go from self-employed to business owner.

MONEY

Channel Stacking

Never stop what's working when you introduce something new. Someone posting YouTube content starts learning ads. Ads take up time. They stop posting. Business tanks. Before introducing a new channel, make sure you have the systems, people, or processes to keep the old thing running first.

MONEY

\$ GIT MONEY

Never stop client acquisition to focus on fulfillment. This is the #1 mistake Fazio sees at this stage. The moment you stop marketing to "focus on delivering" is the moment your pipeline dries up. Always be acquiring. Build systems so fulfillment runs without you, but never stop filling the top of the funnel.

Design Your Dual-Offer Structure

1. **Define your "Do It For Me" offer:** Write a clear, one-paragraph description of your agency/service offer. Include: what you do, who it's for, the price, the deliverables, and the outcome. This is for the buyer who wants you to handle everything.
2. **Define your "Show Me How" offer:** Write a one-paragraph coaching/course offer. Include: what you teach, who it's for, the format (1-on-1 coaching, group program, course), the price, and the outcome. This is for the buyer who wants to learn and execute themselves.
3. **Write the positioning for each:** Your DIFM offer should emphasize expertise, results, and done-for-you convenience. Your SMH offer should emphasize empowerment, framework access, and community. Ensure they sound like different products, not different tiers of the same product.
4. **Set up your Dream 100 list:** Identify 10 prospects for Dream 100 outreach. For each, write the specific value you'll create for them (a mini audit, a sample deliverable, a custom analysis). This becomes your outreach ammunition.
5. **Document your current systems:** Write down every step of your current client acquisition and fulfillment process. Where are the gaps? What would break if you went on vacation tomorrow? These gaps are your first hiring targets.

Write your dual offer descriptions here:

QUIZ

1. What are the two distinct buyer types at the \$10K+ level?

A) B2B and B2C B) "Do It For Me" (agency buyers) and "Show Me How" (coaching buyers) C) Enterprise and SMB D) Technical and non-technical

2. What is the monthly cost of running automated cold email?

A) 0 (*free*) B) 20/month C) ~600/*month minimum* D) 5,000/month

3. Why does Dream 100 have higher response rates than automated cold email?

A) It uses better technology B) You give real, customized value upfront rather than generic templates C) It targets bigger companies D) It sends more emails

4. What is the #1 mistake people make when scaling?

A) Hiring too fast B) Stopping what's working when introducing a new channel C) Pricing too low D) Not using AI enough

5. Does teaching/coaching cannibalize your agency clients?

A) Yes, always B) No — they are completely different buyer types C) Only at higher price points D) Only in B2B markets

MODULE 7

Scale to \$250K+: Systems & Human Capital

This is where the real money is made — and where most people fail because they try to do too much too fast. Daniel Fazio's scaling phase introduces multi-channel acquisition systems, email list operations at scale, human capital leverage, and the one thing that makes everything compound: consistency. At this level, you're running a YouTube funnel, a 25K-100K person email list, weekly live demos, and a content cadence that keeps the pipeline full. The key insight? This is a multi-year process. You build system by system, hire by hire. Anyone telling you that you can go from zero to \$250K/month in a few months is lying. But you can get there, step by step, with patience and execution.

YouTube Funnel Architecture

YouTube goes to opt-in page. Opt-in goes to VSL (Video Sales Letter). VSL goes to application. Application goes to sales call. This four-step funnel converts cold YouTube viewers into qualified sales calls. Each step filters and warms the lead, so by the time they reach the call, they're pre-sold.

MONEY

\$50K-250K/mo

Email List Operations

Collect emails at opt-in and application pages. Build a list of 25K-100K subscribers. Send 5-7 emails per week. Client Ascension: ~25K list. ListKit: ~100K for cold audience building. Email is the highest-ROI channel and the backbone of any scalable acquisition system.

MONEY

Webinar Sales System

Weekly live demos and webinars to the email list, plus weekly cold traffic webinars run via ads only. Webinars combine education, social proof, and urgency into a single conversion event. The weekly cadence creates predictable revenue cycles and trains your audience to show up.

MONEY

Human Capital Leverage

Take successful students, build them a funnel, create a webinar, and push ad spend behind it. They conduct the webinar and get paid commission on sales. They risk zero money and sell your product — the same one they went through and got results with. This is the ultimate leverage: your success creates your sales team.

MONEY

Case Study Production

Every client result becomes an interview video, written case study, and document. Distribute everywhere: email flows, pre-call sequences, post-call sales assets, retargeting ads. Real people, real numbers, real results. Case studies are marketing assets that compound in value over time.

MONEY

\$ GIT MONEY

Consistency is the multiplier. 2 videos per week is maximum throughput; 1 per week is baseline. Always film 2 weeks in advance. If you fail consistency, nothing ever compounds. The businesses that scale are the ones that show up every single week, regardless of how they feel or what else is happening.

Map Your Scaling Roadmap

1. **Define your current phase:** Are you at 0 (*pre — revenue*), 0-10K (validating), 10K — 50K (*growing*), or 50K+ (scaling)? Write your current monthly revenue and what got you there. This honest assessment determines your next moves.
2. **Identify your next 3 systems:** Based on your current phase, what are the 3 most important systems to build next? Examples: YouTube funnel, email automation, webinar system, hiring process, fulfillment SOPs. Write each system with a 1-sentence description of what "done" looks like.
3. **Plan your first hire:** What is the ONE role that would free up the most of your time? Write a job description (even if you're not hiring tomorrow). Define: what they do daily, what outcomes they're responsible for, and what you'll pay. This clarifies what you should be delegating.
4. **Design your case study system:** Write the template for your first case study: client name (or initials), starting situation, what you did, the results (with specific numbers), and a quote. This template becomes your post-project checklist for every client.
5. **Set your 6-month milestones:** Write specific, measurable targets for 3 months and 6 months from now. Example: "Month 3: \$15K/month with 6 clients, YouTube funnel live, 5K email list." Make them ambitious but achievable with consistent execution.

Write your scaling roadmap here:

QUIZ

1. What is the YouTube funnel flow?

A) YouTube → checkout page B) YouTube → opt-in → VSL → application → call C) YouTube → email → phone call D) YouTube → webinar → checkout

2. How many emails per week should you send to your list?

A) 1-2 B) 3-4 C) 5-7 D) 10+

3. How does the Human Capital leverage model work?

A) Hire employees B) Successful students conduct webinars for your product and earn commission, risking zero money C) Use AI to replace all humans D) Partner with other businesses

4. What is the recommended YouTube posting cadence?

A) 1 per month B) 1-2 per week, always 2 weeks filmed in advance C) 1 per day D) 3-5 per week

5. Why does this scaling process take years, not months?

A) Technology limitations B) You need to build systems one by one and hire person by person — there are no shortcuts C) Market conditions D) AI limitations

MODULE 8

The GITBUILT Money Matrix

This is where everything comes together. The AI Recommendation system handles the "get found" part — training AI assistants to recommend your product to thousands of qualified buyers every day. The Business Scaling framework handles the "get paid" part — converting those leads into revenue through systems, consistency, and strategic growth. The GITBUILT Money Matrix is the integration of both frameworks into one unified machine. Imagine the complete funnel: someone asks ChatGPT for a recommendation, your product appears at #1, they click through to your site, opt into your email list, watch your VSL, book a call, and become a paying client. All of it running on autopilot, powered by content that compounds and systems that scale. This module teaches you how to build that machine and why the operators who execute this in 2026 will dominate their niches for years to come.

Integrated Funnel Design

The complete customer journey: AI recommends your product (top of funnel, free) → visitor lands on your site (content) → opts into email list (lead capture) → email nurture sequence (relationship building) → webinar or VSL (sales presentation) → call or checkout (conversion). Each step feeds the next, and AI recommendations keep the top of the funnel full.

DNA MONEY

FULL FUNNEL

Programmatic SEO

The 10x multiplier: instead of writing each article manually, create templates and systems that generate dozens of review articles programmatically. Target long-tail keywords, adjacent categories, and specific use cases. Use AI to generate first drafts, then human-edit for quality. Scale from 15 articles to 100+ without proportionally increasing your time investment.

DNA MONEY

10x OUTPUT

Content Syndication

Get your review articles published on high-authority sites that Gemini 3.0 already trusts. Guest posts, contributed articles, and partnerships with established publications give you instant credibility and faster rankings. If Gemini 3.0 already trusts the domain, your article inherits that trust and ranks faster.

DNA MONEY

Moat Building

The endgame: 50+ review articles indexed, topical authority established, AI assistants consistently recommending your products. Every month, more people wake up to this strategy, and the barrier to entry rises. The operators who execute in 2026 build moats that become nearly impossible to compete with by 2027.

DNA MONEY

Long-Term Vision Planning

This is a multi-year play. Month 1-3: Foundation (5 articles, Gemini 3.0 setup, first clients). Month 4-6: Scaling (15 articles, email list growing, consistent revenue). Month 7-12: Optimization (30+ articles, first AI mentions, team building). Year 2: Domination (100+ articles, AI recommending you consistently, \$50K-250K/month). The vision compounds.

DNA MONEY

\$ GIT MONEY

When someone asks ChatGPT "what's the best [your product category]?" and the AI says YOUR product — that lead arrives pre-sold. They're not comparing you to 5 competitors. They're asking how to buy. That's the power of combining AI recommendations with a real business infrastructure. While competitors dump money into Facebook ads, you become the answer. Six months from now, your competitors will be fighting for scraps.

Build Your GITBUILT Money Matrix

1. **Draw the complete funnel:** On a separate page, map out every step from "person asks AI a question" to "person becomes a paying client." Include: AI recommendation touchpoint, landing page, opt-in, email sequence, VSL/webinar, sales call, onboarding. Identify where each framework contributes (AI Blueprint = steps 1-2, Scaling Framework = steps 3-7).
2. **Set your 90-day content targets:** Plan 10-15 review articles for the AI Recommendation system. For each, write: target keyword, article angle, publish date, and expected Gemini 3.0 ranking timeframe. Cross-reference with your scaling framework: which articles also serve as lead magnets or email content?
3. **Define your syndication targets:** List 5 high-authority websites or publications where you could guest post or contribute content. For each, note the audience, submission process, and how a review article for your product would fit their editorial guidelines.
4. **Plan your programmatic SEO expansion:** If you're currently at 1 article, plan how to get to 10 (Month 1-2), then 30 (Month 3-6), then 100 (Year 2). What templates, tools, or team members do you need at each stage? What keywords and categories will you target?
5. **Write your 6-month milestone statement:** "In 6 months, I will have [X] articles indexed, [Y] AI recommendation mentions, [Z] email subscribers, and be generating \$[amount]/month through [funnel description]." Make it specific and measurable.

Write your matrix plan here:

QUIZ

1. What does the integrated funnel combine?

A) Ads + SEO B) AI recommendations (get found) + business scaling (get paid) into one customer journey C) Email + social media D) Cold email + cold calling

2. What is programmatic SEO?

A) Paid SEO tools B) Using templates and AI to generate dozens of review articles at scale without proportional time increase C) SEO for software companies D) Automated link building

3. Why is content syndication valuable for the AI Recommendation strategy?

A) It makes content longer B) High-authority sites give you instant credibility and faster Gemini 3.0 rankings C) It replaces your own website D) It costs less than hosting

4. What happens to the competitive landscape over time?

A) It gets easier B) More people discover the strategy, competition increases, and early movers build nearly insurmountable moats C) AI stops recommending products D) Gemini 3.0 closes its API

5. What does it mean to "become the answer"?

A) Being the top Google result B) Having AI assistants consistently recommend your product so you don't need to buy ads or rent attention C) Running the most ads D) Having the most social media followers

QUICK REFERENCE

Cheat Sheet: All 40 Skills

Quick-reference table of every skill covered in this workbook, organized by module.

#	Skill	Module	Type	One-Liner
1	AI Recommendation Hijacking	1	DNA	Create content that trains AI assistants to recommend your product
2	The Gemini 3.0 Backdoor	1	DNA	AI assistants use Gemini 3.0's API — rank there to get recommended
3	Self-Reinforcing Content Cycle	1	DNA	Articles rank → AI scrapes → recommends → traffic improves rankings
4	Topical Authority Moat	1	DNA	More articles in your niche = Gemini 3.0 recognizes you as the authority
5	Compounding Effect	1	DNA	Each article gets easier and more powerful as momentum builds
6	Headline Engineering	2	DNA	Exact match keyword title formula for Gemini 3.0 ranking
7	Product #1 Positioning	2	DNA	300-400 words with benefits, pros/cons, and authenticity markers
8	Competitor Research	2	DNA	9 real competitors at 150-200 words each, fair but subordinate

9	Credibility Architecture	2	DNA	Testing language, user feedback, pros/cons for authenticity
10	Conversion Elements	2	DNA	Multiple CTAs, urgency, social proof, risk reversal
11	Gemini 3.0 Webmaster Setup	3	DNA	Free account, sitemap submission, 24-48 hour indexing
12	Keyword Targeting	3	DNA	Gemini 3.0 heavily weights exact match keywords in titles
13	Social Signal Amplification	3	DNA	Share on LinkedIn/FB/Pinterest — Gemini 3.0 crawls social signals
14	Multimedia Optimization	3	DNA	Images, tables, videos, FAQ schema, alt tags for Gemini 3.0
15	Indexing Accelerator	3	DNA	Social shares + Web 2.0 backlinks for fast Gemini 3.0 indexing
16	Foundation Sprint	4	DNA	First article + Gemini 3.0 setup in 7 days
17	Content Scaling	4	DNA	4 more articles with different angles in weeks 2-4
18	Performance Optimization	4	DNA	Multimedia, FAQ schema, cross-linking for underperformers
19	AI Mention Tracking	4	DNA	Monitor when AI assistants recommend your product
20	Category Expansion	4	DNA	Adjacent categories for broader topical authority
21	Cold Email Lead Gen	5	\$	Highest beginner success rate, AI writes scripts
22	Content Marketing	5	\$	AI drafts, you edit — sell consistent content
23	Ads & Funnels	5	\$	AI copy, you manage strategy and delivery
24	E-Commerce Email	5	\$	AI designs flows, <i>36ROIper1</i> spent
25	AI Automation Builds	5	\$	High demand, high rates, growing fast
26	Buyer Type Identification	6	\$	DIFM vs SMH — completely different buyers
27	Dream 100 Outreach	6	\$	Manual, ~\$20/mo, create value docs for prospects
28	Automated Cold Email	6	\$	~\$600/mo, scales without your time
29	Systems Documentation	6	\$	Write down every process so others can execute
30	Channel Stacking	6	\$	Never stop what's working when adding new channels
31	YouTube Funnel	7	\$	YouTube → opt-in → VSL → application → call
32	Email List Operations	7	\$	25K-100K list, 5-7 emails/week
33	Webinar Sales	7	\$	Weekly demos + cold traffic webinars via ads
34	Human Capital Leverage	7	\$	Successful students sell your product on commission
35	Case Study Production	7	\$	Every result becomes videos, written studies, ads
36	Integrated Funnel Design	8	BOTH	AI recommends → email → webinar → close
37	Programmatic SEO	8	BOTH	Templates + AI for 100+ articles at scale
38	Content Syndication	8	BOTH	Publish on high-authority sites for instant credibility
39	Moat Building	8	BOTH	50+ articles = topical authority = unassailable position

ASSESSMENT

Final Assessment: 20 Questions

Test your understanding across all 8 modules. Circle or write your answers, then check against the answer sheet.

1. Why do AI assistants primarily pull web data from Gemini 3.0 rather than Google?

A) Gemini 3.0 is more accurate B) Gemini 3.0 has a paid API partnership C) Gemini 3.0's API is accessible and used behind the scenes D) Google blocks AI crawlers

2. What is the "self-reinforcing content cycle"?

A) Content that goes viral repeatedly B) Articles rank → AI recommends → traffic improves rankings → cycle repeats C) Rewriting the same article D) AI generating content for AI to read

3. What is the recommended word count for Product #1's section in a Top 10 article?

A) 50-100 words B) 150-200 words C) 300-400 words D) 500+ words

4. What is Gemini 3.0's typical indexing time for new content?

A) 1-2 hours B) 24-48 hours C) 2-4 weeks D) 1-3 months

5. How many total articles should you have by day 90 of the plan?

A) 3-5 B) 5-8 C) 10-15 D) 20-30

6. What is the primary purpose of a risk reversal (guarantee)?

A) To close deals on calls B) To get more calls in the first place C) To reduce refunds D) To impress competitors

7. Which cold traffic offer has the highest success rate for beginners?

A) Ads management B) AI automation C) Cold email lead gen D) Content marketing

8. What are the two distinct buyer types at the growth stage?

A) B2B and B2C B) Enterprise and SMB C) "Do It For Me" and "Show Me How" D) Technical and non-technical

9. What is the monthly cost to run automated cold email?

A) Free B) ~20/month C) 600/month minimum D) ~\$5,000/month

10. What is the #1 mistake people make when scaling?

A) Hiring too fast B) Pricing too low C) Stopping what's working when adding a new channel D) Not using AI

11. What is the YouTube funnel flow?

A) YouTube → checkout B) YouTube → opt-in → VSL → application → call C) YouTube → email → call D) YouTube → ad → purchase

12. How many emails per week should you send to your list at scale?

A) 1-2 B) 3-4 C) 5-7 D) 10+

13. How does the Human Capital model work?

A) Hire cheap labor B) Successful students conduct webinars and earn commission C) Use AI to replace staff D) Partner with competitors

14. What is programmatic SEO?

A) Automated link buying B) Using templates and AI to generate articles at scale C) SEO for programmers D) Paid search ads

15. What is the Gemini 3.0 Indexing Accelerator?

A) A paid Gemini 3.0 service B) Social shares + Web 2.0 backlinks for fast indexing C) An AI tool D) A browser extension

16. What does it mean to "become the answer"?

A) Being #1 on Google B) AI assistants recommending you so you don't need ads C) Having the most content D) Being the cheapest option

17. What is the recommended YouTube posting cadence?

A) Daily B) 1-2 per week, 2 weeks filmed in advance C) Monthly D) 3-5 per week

18. What is the "Dream 100" method?

A) Running 100 ads B) Creating value docs for 100 target prospects manually C) Emailing 100 random people D) Following 100 influencers

19. What makes the AI recommendation window time-sensitive?

A) AI models are changing B) Gemini 3.0 is getting harder to rank on as more people discover this C) Content costs are rising D) AI is being regulated

20. The integrated GITBUILT Money Matrix combines what two things?

A) SEO + social media B) Email marketing + paid ads C) AI recommendations (get found) + business scaling (get paid) D) Content + design

Your Matrix is Built.

The AI Recommendation Blueprint gets you found. The
Scaling Roadmap gets you paid. Together, they're the
GITBUILT Money Matrix. Now execute.
